

the MISSION

Code for Australia is a Melbourne based initiative aimed at making our cities interactive, our government to speak for its citizens, and to be able to create collective change through our fingertips.

what WE DO

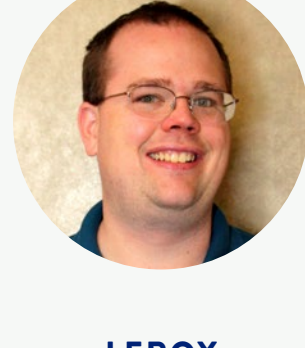

We connect a national network of designers, web developers and entrepreneurs with government leaders and the civic population. Together we "appify" government by creating web and mobile applications that are beautiful, simple and freely accessible.

Code for America space with App examples

the TEAM (so far)

We have assembled a group of entrepreneurs, digital activists and overall decent human beings who have devoted their time to producing digital things, physical things, co-ordinating events aimed at improving, well.... everything!
